

HOW TO USE

WRITE & ERASE

Write with any standard whiteboard marker & Erase with fibrous cloth or dry erase duster

MARKER CHOICE

There are several Marker brands with different ink chemical formula available in the market. It's recommended to test the erasability of the ink in a small area before use.

REMOVING STUBBORN INK

When dry erase ink has been on a surface for a long time, some spots may harden and become difficult to erase. To remove stubborn ink spots, dampen a micro fibre cloth with water, Clean-Off cleaner or whiteboard cleaner and rub on the surface.

MAINTAIN FOR LONG LASTING

Fully clean the WEpaint surface with damp cloth or Clean-Off cleaner every 15 days. Change the Duster after every 2 month of use for better erasing.

DO NOT USE PERMANENT MARKER

If by mistake it happens then re-mark the lines with whiteboard marker several times and wipe out with clean dry cloth. Repeat the same step several times. Lastly clean the surface with whiteboard cleaner. Avoid direct use of thinner/industrial solvent on WEpaint surface.
