

STEP 01

- Ø WEpaint Clear is a top coat which can be apply over previously painted surface. Do not apply on bared wall or pre primed surface.
- Ø WEpaint clear works best on glosy, semiglosy, egg sell or satin type smooth finish.
- Ø For newly painted wall surface, wait for 7 days to ensure proper drying and hardening of paint before applying Wepaint.
- Ø Wipe the surface with a clean cloth to prevent debris and dust getting caught in the surface during application. If necessary then sand the surface with 2000 no. Sand paper to remove any divots.

STEP 02

Make the place dust free before opening the can.

Add part B in to part A.

Mix part A & B mixture thoroughly for 2-3 minutes with stirring stick

After mixing, you have 1 hr for application of paint

Pour mixture on to paint tray carefully

Add

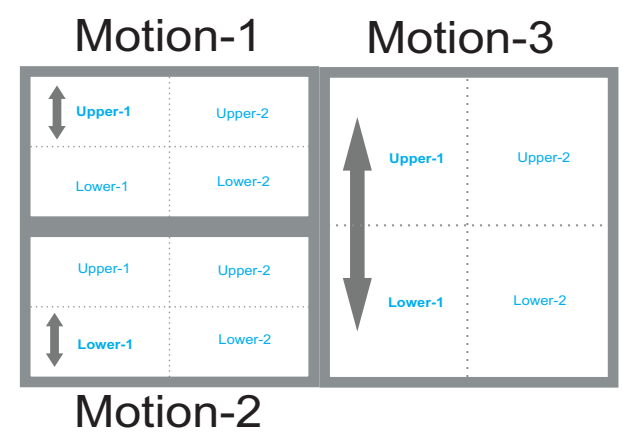

Mix

Pour

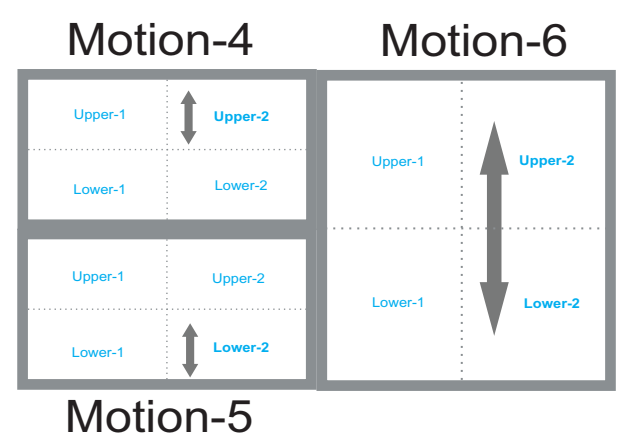

STEP 03

- Ø As shown in above figure, divide wall in to four sections virtually. Saturate the roller properly.
- Ø CLEAR is low viscosity paint; avoid applying too much pressure to the roller during application to minimize drips.
- Ø Start on Upper-1(left top of the wall, MOTION-1) using up and down motion to paint that upper section.
- Ø Once Upper-1 is complete, roll on to lower-1(MOTION-2) section same as previously mentioned.
- Ø If found any roller marks, foam or non- painted surface then cover it by roller with light pressure.

STEP 04

- Ø After that move to fresh Upper-2 section (MOTION-4).Follow up and down motion to cover the surface and then follow the same for Lower-2 section (MOTION-5).
- Ø For larger-scale installations, replace the roller after every 40 sq. ft. of product applied.
- Ø Frequently check the surface for foam, sagging, Non covering area. Cover it with lightly rolling with some material.
- Ø WEpaint is quick drying formulation. DO NOT TOUCH THE WEPAINT-ED SURFACE AFTER 18-20 MINUTES. During this 20 minutes WEpaint-ed surface can be touch by roller, finger to remove/correct Foam, sagging or any other defects.

STEP 05

- Ø Once finished, carefully remove masking tape immediately when applied paint is wet without hampering painted surface and clean up the place.
- Ø Collect all used container, stirr stick, masking tape, paint tray, cover sheet, roller and pack it in to WASTE COLLECTION BAG given in kit and disposed off.

STEP 06

- Ø WEpaint will dry in 2 to 3 hour.
- Ø DO NOT WRITE for 2 days of post-application.
- Ø After wait of 2 days, First check on corner of applied surface with marker pen for writability and erasability (because curing varies on temperature/humidity and so on region to region)
